

Alternative to Sage 50 Credit Card Processing

Sage offers accounting software programs that bring results to their customers. Including Sage 50 (Peachtree), their line of products are superior. Sage also offers a merchant processing product for credit card processing, but at a much higher price than necessary. Century Business Solutions offers an [alternative to Sage 50 credit card processing](#) that operates with the same functionality– but at a fraction of the cost. With Century Business Solutions, you can experience the same benefits that you would see with Sage Payment Solutions with additional features for you to enjoy.

Our payment processing module is a great alternative to Sage 50 credit card processing and stands far above our competition.

Q: How to Find an Alternative to Sage 50 Credit Card Processing

Research! Stop wasting your money and take a look at other solutions to your invoicing and credit card receivables. Century Business Solutions offers an exquisite product, with a few additional features that Sage has not yet developed. With free and unlimited consultations, you can receive all the troubleshooting, accounting advice, customer service, support, and training you need — all without paying customer services fees each time you call in.

Q: What makes our payment gateway plugin different from other Sage credit card processing solutions?

The solution Century provides is *not* a third party plugin; in fact, it's native to your Sage ERP system, running invisibly in the background. The software is completely PCI compliant, which means your customer data is always stored offsite, never on your own servers. Plugins for Sage 100 ERP and Sage 500 ERP from versions 5.0 and beyond utilize [tokenization](#), which means your customers' credit card data is replaced by unusable tokens, making it the most advanced and secure solution yet.

The Sage credit card processing module that Century provides is also designed specifically to obtain lower interchange costs on business-type credit cards, corporate credit cards, and government purchasing (GSA) cards – all automatically, with no extra data entry. Furthermore, Century offers all related training, support, installation (and re-installation), troubleshooting, debugging, and any other support you can think of **completely free of charge**. There has never been a cheaper way to accept the most expensive kinds of credit cards than with this solution.

Q: What makes it the same?

The payment module we provide was designed merchants' needs you in mind. If you're already familiar with Sage credit card processing by Sage Payment Solutions, you'll be happy to know the solution we provide looks and functions exactly the same way as the Sage Payment Solutions virtual terminal and the Sage payment gateway you're used to. That means you'll never have to retrain your staff or advise them of new procedures if you plan on making the switch – everything about your process can stay exactly the same. And, because the processing plugin runs native inside your Sage program of choice, you won't be subjected to month-long delays or any interruptions in service. Installing the credit card plugin only takes about fifteen minutes – and then, you're free to run a transaction.

Get started today with an all-encompassing payment processing solution made especially for Sage accounting systems

- Complimentary installations, training, and 24/7 local support over the life of your account – no hidden fees
